

Axis.ONE

Unified Industrial AI Platform

From field intelligence to centralized AI operations,
Axis.ONE connects industrial AI through one unified platform.

[PRODUCT BROCHURE](#)

Axis.ONE is a unified platform for industrial AI.

It connects field devices, edge computing, data, and AI capabilities within a single environment, enabling seamless deployment and operation across industrial sites.

ONE PLATFORM

Field → Edge → Intelligence

A single operational environment designed to bring AI closer to industrial sites while keeping platform intelligence centrally managed.

Industrial AI

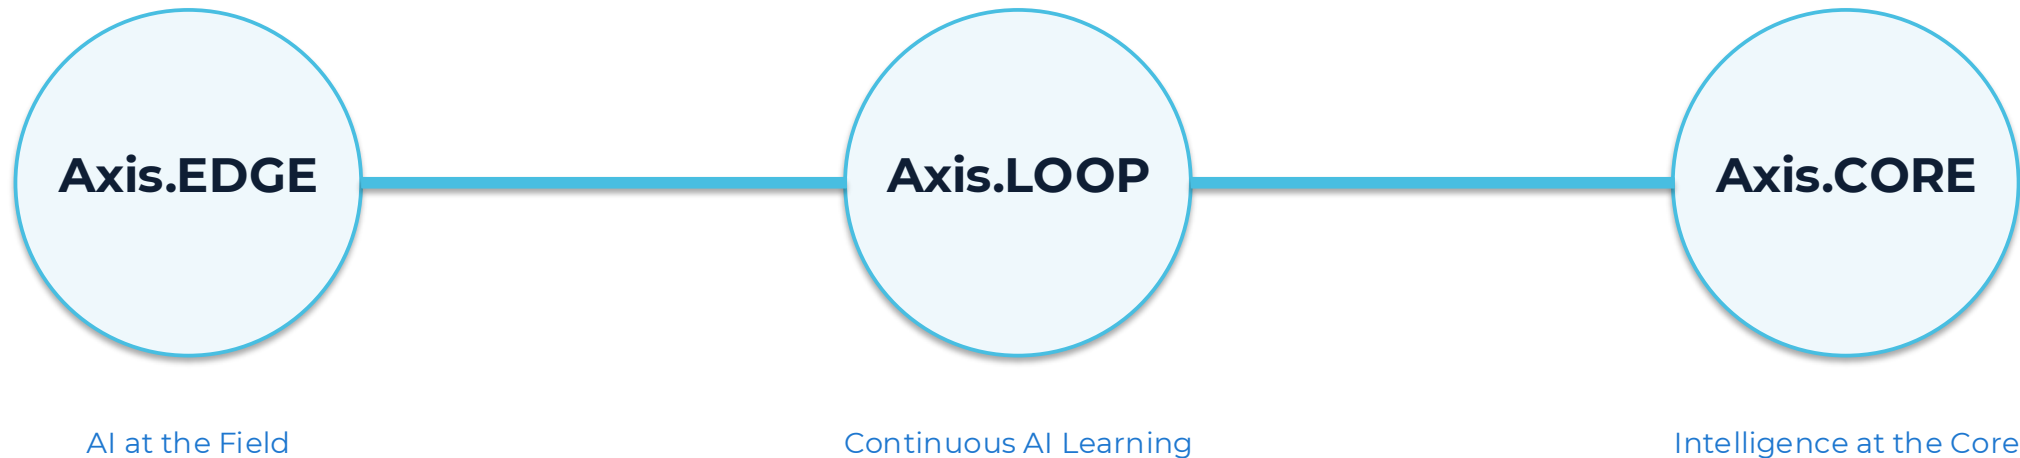

On-Prem

Edge

Discover the structure behind Axis.ONE.

See how Axis.EDGE, Axis.LOOP, and Axis.CORE work together to connect field intelligence, continuous AI learning, and centralized control.

Axis.EDGE

Brings specialized AI services closer to field devices for real-time industrial operations.

Axis.LOOP

Connects field operations and core intelligence through a continuous cycle of learning and improvement.

Axis.CORE

Provides centralized AI operations, management, and control within the on-premises environment.

Specialized AI services at the field – Axis.EDGE

Axis.EDGE brings AI workloads closer to industrial devices for responsive, application-specific operations.

Robo.ONE

AI-powered perception and intelligent control for robotic systems and automation.

Vision.ONE

Vision AI for inspection, monitoring, and intelligent manufacturing operations.

Safe.ONE

Multimodal awareness for detecting and analyzing safety-related events in real time.

Assist.ONE

LLM-powered assistance using voice, language, and contextual information.

On-premises intelligence and platform management

– Axis.CORE

Axis.CORE provides the core services required to operate, coordinate, and manage Axis.ONE within the on-premises environment.

Axis.CORE

ON-PREMISES SERVER

Core services and management capabilities for the Axis.ONE platform.

DB / Data Storage

Stores operational data, AI results, configurations, and system information.

AIOps

Supports deployment, monitoring, and operation of AI models and services.

Resource Management

Manages computing resources and workloads across the platform.

Orchestration

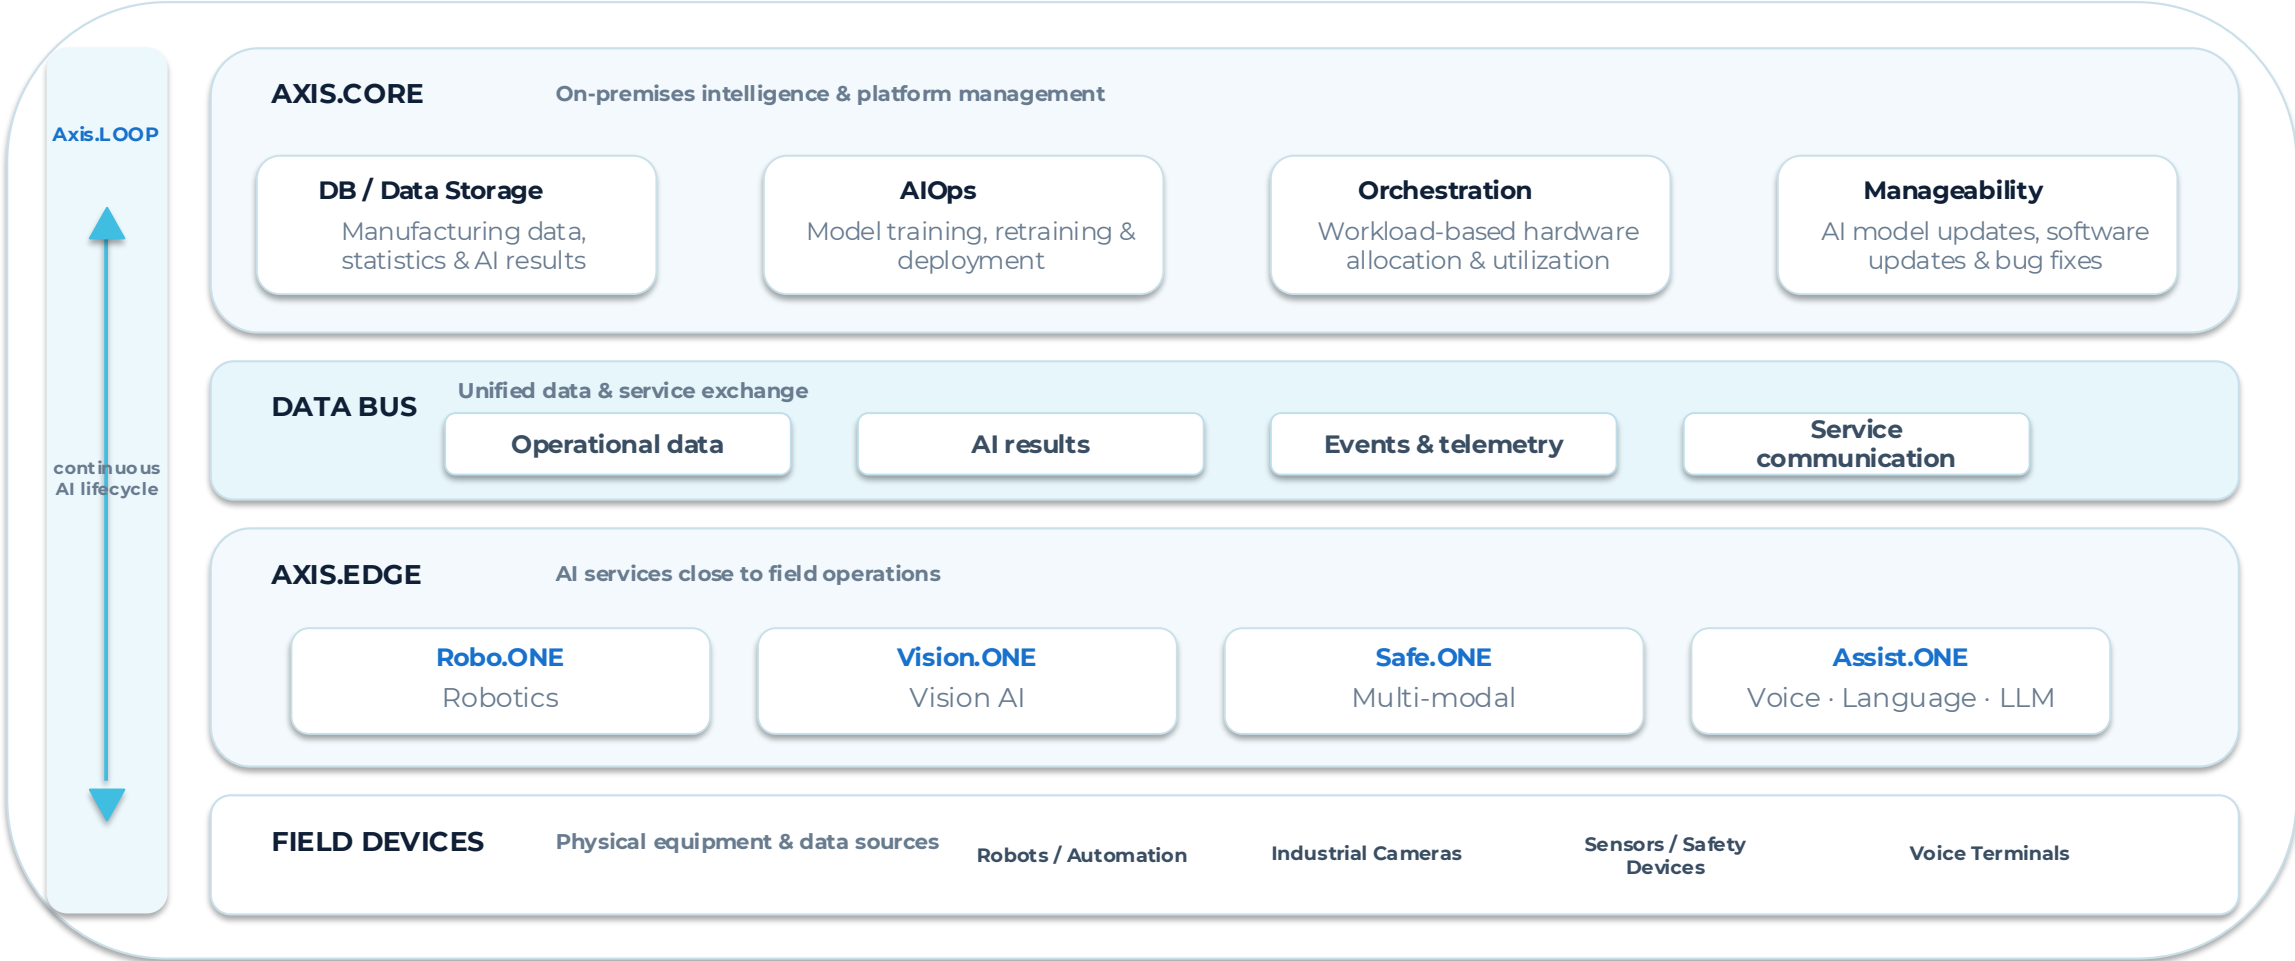

Coordinates services and workloads across connected system components.

Manageability

Provides centralized monitoring, configuration, and control of the platform.

From field devices to on-premises intelligence.

Axis.ONE connects field equipment, edge AI services, data exchange, and centralized on-premises operations in one architecture.

Axis.ONE

One Platform. Smarter Industries.

Unified industrial AI from field intelligence to centralized operations.
